

### berne levy physiology bruce pdf

The diad is a structure in the cardiac myocyte located at the sarcomere Z-line. It is composed of a single t-tubule paired with a terminal cisterna of the sarcoplasmic reticulum. The diad plays an important role in excitation-contraction coupling by juxtaposing an inlet for the action potential near a source of Ca<sup>2+</sup> ions. This way, the wave of depolarization can be coupled to calcium-mediated ...

The ventral respiratory group (VRG) is a column of neurons located in the ventrolateral region of the medulla, extending from the caudal facial nucleus to approximately 400 μm rostral to the obex. The ventral respiratory group is one of the respiratory groups in the respiratory centre. The four groups of neurons of the VRG are the rostral retrofacial nucleus, caudal nucleus retroambiguus, nucleus paraambiguus, and the ...

### Acide biliaire - Wikipedia

Production et sécrétion. Les acides biliaires sont produits dans le foie par l'oxydation du cholestérol. Ils sont conjugués avec la taurine ou de l'acide aminé glycine, ou encore avec un sulfate ou un glucuronide, et sont ensuite stockés dans la vésicule biliaire. Les acides biliaires ont également pour but de briser les graisses.

Moškani so del osrednjega živčnega sistema. Nahajajo se v lobanji. Zgrajeni so iz okoli 100 milijard živčnih celic ali nevronov in tehtajo približno 1200–1400 gramov. Sestavljajo jih veliki in mali moškani ter moškansko deblo. Na makroskopskem prerezu moškanov ob njihovem robu vidimo siv predel, imenovan tudi sivina in v katerem so v glavnem zbrana telesa živčnih celic.
