Fault Tree Handbook with Aerospace Applications

Fault detection, isolation, and recovery (FDIR) is a subfield of control engineering which concerns itself with monitoring a system, identifying when a fault has occurred, and pinpointing the type of fault and its location. Two approaches can be distinguished: A direct pattern recognition of sensor readings that indicate a fault and an analysis of the discrepancy between the sensor readings ...

Slide 3 Deep Life Ltd " For those times when equipment must work Diving Hazards and Rebreathers
Diving is in itself a hazardous activity, with risk of fatality between 1 in 10,000 and 1 in 80,000 hours: around 1 in 9,000 diver years. The highest socially acceptable risk is considered to be that of a woman giving birth in a developed country: a 1 in 9000 risk of a fatal outcome.
