3 The survivor function or survivorship function,  $S(t)$ , is the complement to the CDF and is defined as follows:  $S(t) = 1 - F(t)$  for continuous time; or  $S(t) = 1 - F(t)$  for discrete time. The value of the survivor function for an individual is the probability that the event has not yet occurred at time  $t$  (continuous) or prior to the close of observation period  $m$  (discrete time).

General-purpose computing on graphics processing units (GPGPU, rarely GPGP) is the use of a graphics processing unit (GPU), which typically handles computation only for computer graphics, to perform computation in applications traditionally handled by the central processing unit (CPU). The use of multiple video cards in one computer, or large numbers of graphics chips, further parallelizes the ...

Cloud computing is shared pools of configurable computer system resources and higher-level services that can be rapidly provisioned with minimal management effort, often over the Internet. Cloud computing relies on sharing of resources to achieve coherence and economies of scale, similar to a public utility.. Third-party clouds enable organizations to focus on their core businesses instead of ...
