An electrical grid is an interconnected network for delivering electricity from producers to consumers. It consists of Generating stations that produce electrical power; high voltage transmission lines that carry power from distant sources to demand centers; Distribution lines that connect individual customers.; Power stations may be located near a fuel source, at a dam site (to take advantage ...

Electrical grid - Wikipedia

Electric power transmission is the bulk movement of electrical energy from a generating site, such as a power plant, to an electrical substation. The interconnected lines which facilitate this movement are known as a transmission network. This is distinct from the local wiring between high-voltage substations and customers, which is typically referred to as electric power distribution.
