chemical screening of the urine has become a sensitive and rapid procedure. Completion of urine chemistry using reagent test strips occurs in 2 minutes. Several brands of dipsticks are available worldwide. A comparison of some of the strips available from various manufacturers is made in this chapter.

Chemical Analysis CHAPTER 4 of Urine

Chemical composition of sediment can be determined by methods of rock analysis in which all constituents are rendered soluble by strong acid treatment or fusion. The composition may be expressed in mineralogical terms, generally by identifying species present by optical methods or by X-ray diffraction.

SIGNIFICANCE OF PROPERTIES AND CONSTITUENTS REPORTED IN

A complete chemical analysis of a body of unknown composition involves the recognition of its component parts by the methods of qualitative analysis, and the determination of the proportions in which these components are present by the processes of quantitative analysis.

An Introductory Course of Quantitative Chemical Analysis

Chemical analysis is arguably one of the most important aspects of forensic science. Nearly every piece of evidence yields additional information when analyzed by a chemical procedure.
