### **The Mesozoic Echinodermata of the United States (eBook**

Exploring these questions will involve a phylogenetically-focused study of fossil crinoids of the middle to late Paleozoic as well as the early Mesozoic.

### **Project V: Paleozoic-Mesozoic transition of crinoids**

Introduction: What are Echinoderms? Echinoderms are a group of marine animals consisting of well known organisms such as the starfish, sea cucumber and the sand dollar. The phylum Echinodermata consists of about 7000 living species and the phylum is divided into five smaller classes. Echinodermata is Greek for "spiny skinned." This is clearly seen on echinoderms such as the brittle star and the sea urchin.
