Tumor hypoxia is the situation where tumor cells have been deprived of oxygen. As a tumor grows, it rapidly outgrows its blood supply, leaving portions of the tumor with regions where the oxygen concentration is significantly lower than in healthy tissues.

Structure. Most, if not all, oxygen-breathing species express the highly conserved transcriptional complex HIF-1, which is a heterodimer composed of an alpha and a beta subunit, the latter being a constitutively-expressed aryl hydrocarbon receptor nuclear translocator (ARNT). HIF-1 belongs to the PER-ARNT-SIM (PAS) subfamily of the basic helix-loop-helix (bHLH) family of transcription factors.

### **Hypoxia-inducible factors - Wikipedia**

2. Regulation and function of hypoxia-inducible factors. HIFs are proteins that sense and respond to oxygen deficiency by acting as transcription factors ( ). Each HIF transcription factor is composed of two subunits: the  $\alpha$ -subunit and the  $\beta$ -subunit, both of which belong to the basic helix-loop-helix (HLH)-PER-ARNT-SIM (bHLH-PAS) protein family (Bersten et al., 2013).

### **Therapeutic targeting of hypoxia and hypoxia-inducible**

The hypoxic microenvironment induced by sonodynamic therapy (SDT) via sonochemical oxygen consumption usually triggered tumor resistance to SDT, impeding therapeutic efficacy. In this sense, it was highly desired to tackle the hypoxia-related negative issues.

Fig 2 . Schematic representation of PET principle. (A) After travelling in tissue (positron range) positron loses energy and annihilates with electron resulting in two 511 keV annihilation photons travelling in opposite directions; (B) Annihilation photons are registered externally by radiodetectors consisting of scintillation crystals and photomultiplier tubes and assembled in a ring.

The  $\sim$  mild  $\text{^{\circ}C}$  cold stress caused by standard sub-thermoneutral housing temperatures used for laboratory mice in research institutes is sufficient to significantly bias conclusions drawn from murine models of several human diseases. We review the data leading to this conclusion, discuss the implications for research and suggest ways to reduce problems in reproducibility and experimental ...

Open Access journals are the major source of knowledge for young and aspiring generations who are keen in pursuing a career in sciences. This system provides easy access to networks of scientific journals. Authors

that contribute their scholarly works to Open Access journals gain remarkable reputation as the research scholars explore these works extensively.

", Reviews in Medical Microbiology 13(1):37-42, January 2002, Wainwright, Milton Abstract: The recent recognition that the bacterium *Helicobacter pylori* potentially plays a role in the aetiology of gastric cancer has highlighted the possibility that other non-virus microorganisms, including yeasts and filamentous fungi, may also cause cancer in ...

All these factors play a crucial role in maintenance of cellular homeostasis. A stressor works by initiating any of these mechanisms. Oxidative stress occurs when the homeostatic processes fail and free radical generation is much beyond the capacity of the body's defenses, thus promoting cellular injury and tissue damage.
