Unified Field Theory. The Unified Field Theory derives the Planck equation and Newton's gravity equation and explains why the electron is stable. The electron has a single Torque Grid distortion on its shell and is in resonance with its wavelength. Therefore, electron is stable and electronic field is formed.

Unified field theory. Classically, however, a duality of the fields is combined into a single physical field. For over a century, unified field theory remains an open line of research and the term was coined by Albert Einstein, who attempted to unify his general theory of relativity with electromagnetism.
