Steel is an alloy of iron and carbon and other elements. Because of its high tensile strength and low cost, it is a major component used in buildings, infrastructure, tools, ships, automobiles, machines, appliances, and weapons.. Iron is the base metal of steel. Iron is able to take on two crystalline forms (allotropic forms), body centered cubic and face centered cubic, depending on its ...

Welcome to Wisconsin Iron Works

Perhaps as early as 500 BC, although certainly by 200 AD, high-quality steel was produced in southern India by the crucible technique. In this system, high-purity wrought iron, charcoal, and glass were mixed in a crucible and heated until the iron melted and absorbed the carbon. Iron chain was used in Indian suspension bridges as early as the 4th century.

Iron and Railings International, Inc. | Custom Iron Fences

Iron is a chemical element and a metal. It is the second most common metal on Earth, and the most widely-used metal. It makes up much of the Earth's core, and is the fourth most common element in the Earth's crust.. The metal is used a lot because it is strong and cheap. Iron is the main ingredient used to make steel. Raw iron is magnetic (attracted to magnets), and its compound magnetite is ...

Iron - Simple English Wikipedia, the free encyclopedia

3 As noted in the previous descriptions, corrosion resistance is the paramount concern when it applies to the proper selection of materials applying to the chemical processing industry at large.
